Soil pH for Vegetables - Complete List - GrowingAnything.com Soil pH for Vegetables The target soil pH for vegetables typically falls between 5.5 and 7.5, although there are a few exceptions. Your goal should be to keep your garden's pH within 0.5 of your veggies' desired range. Soil pH Levels for Plants | The Old Farmer's Almanac A pH of 6.5 is just about right for most home gardens, since most plants thrive in the 6.0 to 7.0 (slightly acidic to neutral) range. Some plants (blueberries, azaleas) prefer more strongly acidic soil, while a few (ferns, asparagus) do best in soil that is neutral to slightly alkaline. Acidic (sour) soil is counteracted by applying finely ground limestone, and alkaline (sweet) soil is treated with gypsum (calcium sulfate) or ground sulfur. How to Adjust Soil pH for Your Garden - dummies Vegetable Gardening For Dummies, 2nd Edition By Charlie Nardozzi, The Editors of the National Gardening Association Most garden soils have a pH between 5.5 and 8.0.

Recommended Soil pH for Growing Different Fruits and ... A soil with a pH lower than 7.0 is an acid soil and one with a pH higher than 7.0 is alkaline. The soil must be adjusted to suit the plant which will occupy that area if it is not already within that plants requirement range. Best Soil For Growing Vegetables - Soil Preparation For ... Soil pH for Vegetables. While exact pH requirements for vegetables vary somewhat, in general, the soil in a vegetable garden should fall somewhere be 6 and 7. If your vegetable garden soil tests significantly above that, you will need to lower the pH of the soil. Soil pH Levels for Vegetables, Gardener's Network Ideal Soil pH Levels for Vegetables Growing the very best vegetables, starts with an ideal garden soil pH level for vegetables. Ideal pH levels varies by plant, to help them reach their optimum growth potential.

How to test your garden soil's pH, and fix it for great ... When it comes to vegetable/annual gardening, it is known that a more bacterial dominant soil gives more of the ideal soil conditions for our hungry vegetable plants. But in saying that, it is important to have a balanced bacteria to fungal ratio for both the pH and nutrient cycling. Vegetable Crop Soil pH Tolerances - Harvest to Table Vegetables and other plants grow best when the soil pH is optimal for the plants being grown. It is important to match a plant to the soil pH or to adjust the soil pH to a plant's needs. Soil pH is the measure of the soil's acidity or alkalinity. Your Garden's Soil pH Matters - Organic Gardening Your Garden's Soil pH Matters ... Most food crops prefer a pH of 6.0 to 6.5, but you can have a productive food garden as long as your pH is about 5.5 to 7.5 (see chart in slideshow).
