WHO | Entomology and vector control Vector control is an essential component of malaria prevention. Such control has been proven to successfully reduce or interrupt malaria transmission when coverage is sufficiently high. The two core, broadly applicable measures for malaria vector control are long-lasting insecticidal nets (LLINs) and indoor residual spraying (IRS). Vector control (motor) - Wikipedia Vector control, also called field-oriented control (FOC), is a variable-frequency drive (VFD) control method in which the stator currents of a three-phase AC electric motor are identified as two orthogonal components that can be visualized with a vector. One component defines the magnetic flux of the motor, the other the torque. Home - Vector Control District - County of Santa Clara To detect and minimize vector-borne diseases, to abate mosquitoes, and to assist the public in resolving problems with rodents, wildlife, and insects that can cause disease, discomfort or injury in humans.
